It's fast and easy, when you use Curtiss-Wright's, unique GripTight PE Test Plugs. Just slip it in the open end of a section of pipe – or in the ends of a reel – and hand tighten. You're ready to test up to 150% of maximum operating pressure. What's more, the plug uses test pressure to energize and engage the seal and gripper, providing a safe, secure, leak-tight seal.

Compare this with using end caps or "test heads": the pipe ends have to be squared and rounded, the test head fused to the end, and the joint has to be allowed to cool before testing can begin. All this takes place while your valuable crew stands around, waiting to go to work.

Typical Use Cases

- Test pipe on reels
- In open trenches on installed and joined pipe sections
- As a nightcap to keep open pipe ends sealed and clean overnight
- During work intervals
- To maintain positive pressure on sections after they've been installed
